PS Claim 6; Fig 1A-D; 73pp; English.

CC This DNA encodes a human DnaJ-like protein, HSPJ1. The invention provides CC two human DnaJ-like proteins which are heat shock proteins J1 and J2 CC (HSPJ1 and HSPJ2) and nucleic acid sequences encoding the proteins. Host CC cells containing a vector comprising the nucleic acids are used for the CC production of recombinant proteins. Recombinant HSPJ1 and HSPJ2 are used to raise Ab, therapeutically and to screen for specific binding agents. CC Antagonists are used to treat or prevent a wide variety of solid cancers, CC leukaemia and lymphoma; immune disorders (typical of many disclosed are acquired immune deficiency syndrome, allergy, asthma, Crohn's disease, CC diabetes mellitus, multiple sclerosis, rheumatoid arthritis, microbial CC and parasitic infections) and inflammation. Agonists may be used to treat cor prevent tissue damage, e.g. in cases of ankylosing spondylitis, heart CC or prevent tissue damage, e.g. in cases of ankylosing spondylitis, heart CC attack, ischaemia, UV exposure, insulin-dependent diabetes and for wound CC healing, and may be expressed from a vector containing the nucleic acids. Fragments of the nucleic acids are used as primers and probes for CC detecting and quantifying the HSPJ-encoding nucleic acid in usual hybridisation and/or amplification assays, therapeutically as antisense, CC triplex-forming or ribozyme molecules, and for chromosome mapping.

                                                                                                                                                                                                         This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for the production of antibodies.
                                                                                                                                                                                                                                                                                                         New isolated Helicobacter polynucleotides - used to develop
for the diagnosis, prevention and treatment of Helicobacter
infections and gastrointestinal diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
             memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so continuous trial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock Syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating to compute the S.aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-JUL-1997.

                                             infection.

To claim: Page 632-634; 2084pp; English.

Can computer readable medium has been developed which has recorded on it can be uncleotide sequences isolated from the Enterococcus faecalis genome. Can computer readable medium has been developed which has recorded on it can identify represent these nucleotide sequences which are primary can identify fragments of the Enterococcus faecalis genome with can identify fragments of the Enterococcus faecalis genome with can identify fragments of the products can be used to detect the presence commercial importance. The products can be used to detect the presence can identify fragments in samples. They can also be used for can be used for diagnosing Enterococcal infection in an animal and monitoring can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or can can be used to can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or can convert content of the products and for identifying agents which can be used to compute the growth or pathogenicity of Enterococcus faecalis, or can be used to content related organism, in vivo or in vitro. In particular the products related organism in vivo or in vitro. In particular the confidence of the products and for identifying agents which can be used to confidence organism. In vivo or in vitro. In particular the products are considered by the Enterococcus faecalis nucleotide sequences are considered organism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              populations are amplified by the polymerase chain reaction, using the same oligo-dT primer and a 5'-primer which includes common 4-5 nucleotide sequence combinations, e.g. T11785. After gel electrophoresis of the products, bands unique to anergised on non-anergised cells are excised, eluted, amplified, cloned and sequenced. Genes and proteins (and corresponding antibodies) arising from this procedure may be used e.g. in monitoring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence encodes a mouse cysteine string protein isolated from mouse T-cell clones 11.3.7 and 12.2 by a new procedure for identification of genes associated with anergy. The protein is expressed in resting T-cells but not in anergic T-cells. To isolate proteins of this type, differential display is first performed by generating cDNA from polyA+ mRNA with an oligo-dT primer with 2 variable anchor nucleotides at the 3'-end, e.g. T1786, using reverse transcriptase. The resulting cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      effectiveness,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          In Identifying genes associated with T-cell anergy, and the proteins of encoded by them - useful to elucidate the anergic state, and pridentify agents associated with induction of anergy it identify agents associated with induction of anergy it identify agents associated with anergy in T-cells. Genes with at least CC for which is associated with anergy in T-cells. Genes with at least CC electrophores for detection of the anergic state, and may be used as probes for detection of the anergic state, and may be considered by a new procedure. Differential display is first component of the anergic state, and may be inside the procedure of the anergic state, and may be considered by generating cona from polyath man with an oligo-draw considered by generating conditions of the polyath man with an oligo-draw considered by the polyath man with an oligo-draw considered by the polymerase chain reaction, considered to a component and a first procedure which includes common 4-5 nucleotide sequence combinations, e.g. Til785. After considered considered delectrophoresis of the products, bands unique to anergised or consumenced. Genes and proteins (and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections and corresponding antibodies) arising from this procedure may be used e.g. in monitoring confections are and proteins.

The sequence is that encoding a secreted protein from a human fetal kidney clone AM610. Such a sequence is predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopolesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, and tumour invasion suppressor activity, and tumour inhibition activity. It is also stated to be useful for gene

PT Streptococcal heat shock proteins and corresponding DNA sequences - PT used in the production of a vaccine to treating and preventing PT strain-specific Streptococcal infection PS Claim 28; Page 90.94; 156pp; English.

PT This nucleotide sequence, isolated from a Streptococcus pneumoniae CC HindIII-partially digested genomic DNA library contains 2 open reading CC frames. The first encodes the heat shock protein 72 (HSP72) and the CC responding to the sequence encoding the N-terminus of the DnaJ protein. CC The sequence was isolated using a fragment of the chimaeric gene (T73392) CC corresponding to the sequence encoding the C-terminal 169 amino acids of 64755 daltons (as compared to 72 kb by SDS-PAGE), with a pI of 4.35. CT he protein Mas 58% and 85% identity to the E. coli and Lactococcus CC lactis HSP72 proteins respectively. The HSP72 protein and its fragment, CC or antibodies specific to HSP72, are used in pharmaceutical compositions, CC pref. a vaccine, for treating or preventing infection by S. pneumoniae or related bacteria in humans, e.g. S.pyogenes or S. agalactiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT

The nucleotide sequences depicted in SEO ID NO: 1 to 391 V52134 to V52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide

PT New isolated prostate-derived nucleic acids - used to develop PT products which may have cytokine, immune regulatory, haematopoiesis PT regulating, anti-inflammatory or tumour inhibition activity PS Claim 1; Page 455-456; 675pp; English.

CC X40438 to X40715 represent 5' expressed sequence tags (ESTs) for human CC secreted proteins expressed in prostate, and encode the proteins given in CC Y11716 to Y11993 respectively. The proteins given represent the signal CC peptide and an N-terminal fragment of a secreted protein. The nucleic CC acid sequences can be used for products for diagnosis and therapy. The CC They can also be used to develop products for diagnosis and therapy. The CC proteins obtained may have cytokine activity, cell proliferation and CC growth regulating activity, haematopoiesis regulating activity, tissue CC chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cc. receptor/ligand activity, anti-inflammatory activity, tumour inhibition contrivity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used cor obtaining corresponding promoter sequences. The nucleic acids cencoding the signal peptides can be used for directing extracellular consumptions are producted into a cell.

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB seq

F71623

protein with DnaJ domain PFB0090c - malaria parasite (Plasmodium falciparum)
C;Species: Plasmodium falciparum
C;Date: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 26-Aug-1999
C;Accession: F71623
R;Gardner, M.J; Tettelin, H.; Carucci, D.J.; Cummings, L.M.; Aravind, L.; K
; Pertea, M.; Salzberg, S.; Zhou, L.; Sutton, G.G.; Clayton, R.; White, O.;
Science 282, 1126-1132, 1998
'.m(+)a. Chromosome 2 sequence of the human malaria parasite Plasmodium falc
       A;Title: Chromosome 2 sequence of the human malaria pare A;Reference number: A71600; MUID:99021743
A;Accession: F71623
A;Status: preliminary; nucleic acid sequence not shown; A;Molecule type: DNA
                                                                                                                                                                                                                                                                                         밁
